

Cab Service Management

Scope

The scope of the project consists of cab booking, fare calculation, cab selection, Customer Review , collecting the necessary data from the users for ease of use. The data collected by the site is stored in a database which is stored in the server, which is then used for the various functionalities which are provided by the site. This also enable for the site to make the jobs of the people involved much easier and less time consuming which results in a better and faster experience of the user. It provides the various features stated to make the decision making behind the cab service management much easier and faster.

Out of Scope

1. The cab service does not provide any food facilities.

Reason: It is not part of the service and since any food stain is hard to clean, hence increasing the cost of maintenance

2. The service does not provide any entertainment facilities.

Reason: It is not part of the service provided since the service is just a comfortable ride with music available in the cab.

3. The Management system is not responsible for any injuries that occurs outside the bounds of the cab.

Reason: It is will lead to unnecessary complications to incidents which the system has no knowledge of.

4. It does not allow the user to rent the cab for driving personally.

Reason: Since rental services are a different Service, it is not provided with cab service.

5. It does not allow for any bargaining after the user reaches the destination.

Reason: The fare is already pre calculated according to the standard price any less would be a loss.
